

Sales Partner Program for NCP Secure Entry Clients – universal VPN Clients.

What does NCP do?

NCP simplifies secure access to your central data network via the internet.

The push of a button is all that's needed for the user to log on from a remote workplace anywhere in the world, and with any type of remote terminal. The process is completely secure and can be used on any public network.

To this end, NCP (Network Communications Products) has been developing software since 1986, which has made them one of the leading technology providers worldwide.

Why a partnership with NCP?

With the overall maxim of 'less money per touch', and 'easy to use', NCP now offers a complete suite of solutions for all your remote access requirements:

- **NCP Secure Entry Clients** for universal connectivity of diverse work terminals with head office systems.
- **NCP Secure Enterprise Solution**, where a centrally managed remote access solution is required.

NCP Secure Entry Clients

The NCP Secure Entry Clients bridges a gap in the security business.

It is the answer to the most interesting question on the VPN-market at the moment:

How can I integrate end devices on Windows Vista 32/64Bit, Windows XP 32/64 Bit, Windows 7, Windows Mobile and Symbian in an existing Virtual Private Network with Cisco or other manufacturers?

What our customers appreciate most:

- Less clicks for everyone including administrators
- Little expenditure of time for instruction of users and documentation
- Easy installation
- Integrated, dynamic personal firewall
- Support of all current operating systems*
- Drastic reduction in helpdesk calls
- Compatibility with VPN gateways from different manufacturers**

Figure: Intuitive Grafical User Interface (GUI) Secure Entry Client (Win 32/64)

What our sales partners appreciate most:

- No training at manufacturer's premises required
- Minimal support effort required
- Convincing standalone features
- Rapid ROI

Some testimonials:

"I feel that NCP will fill a gap that we have in our security business. Right now we have many customers purchasing Vista 64 with no way to connect to their Cisco IPSec VPN. All have either downgraded their O/S or installed a VM for connectivity. Neither of these options are preferred."

Cisco Gold Partner in USA

"NCP engineering offered the most intelligent, compatible client on the market, and we haven't had any problems since installation."

Brian Hughes, Network Administrator, First National Bank, USA
